

Public Workshops

The Air Pollution Control District actively solicits participation in the rule development process through its public workshop process. Workshops are held to discuss proposed rules and their potential impact so that any necessary revisions can be made in the early stages. Citizens are encouraged to review proposed actions and submit their comments to the District.

The following previous workshop schedule includes the Workshop Notices (linked to the date) containing the details for the proposed actions and other supporting documents. For questions about workshop scheduling, please contact Janet McCue at 858-586-2712. For information about items that were discussed, each Workshop Notice (linked to the date) contains specific contact information for that workshop.
