COMPLIANCE ADVISORY

Enhanced Vapor Recovery (EVR) In Station Diagnostic (ISD) Installation Deadline for Gasoline Dispensing Facilities (GDF) with Underground Storage Tanks (UST)

The State mandated EVR ISD installation deadline for GDFs with annual gasoline throughputs greater than 600,000 is September 1, 2010. ISD is equipment that provides continuous real time monitoring of critical emission related vapor recovery system parameters and components, and alerts the station operator when a failure mode is detected so that corrective action can be taken. ISD has been required for GDFs with annual gasoline throughputs greater than 1.8 million gallons per year since September 1, 2009. If you have already installed ISD and obtained the required permits, no further action is required. If you have not already installed ISD and your annual gasoline throughput is greater than 600,000 gallons, you need to apply for a District Permit to Operate (PTO) and have the equipment installed no later than September 1, 2010. It is recommended you apply for a District PTO immediately.

For information regarding applications and/or permitting requirements regarding ISD, please contact Mahiany Luther at (858) 586-2725. If you would like information regarding compliance requirements, please contact Randy Smith at (858) 586-2677.
