Air Toxics "Hot Spots" Program Health Risks					
Cancer Risk	Calculates the probability that a person would contract cancer if exposed to emissions for 30 years				
Health Hazard Index	Calculated for acute exposure (or short-term health impacts) and chronic exposure (or long-term health impacts) Index < 1 \longrightarrow no negative health effects				
Cancer Burden	Index ≥ 1 → potential for negative health effects Estimates of the number of people that can contract cancer within a community that is exposed to the emission levels				
	community that is exposed to the emission levels

Next Steps

Hanson to submit a risk reduction plan (RRP, due October 25, 2022), and District to post the RRP for Public Review and Comment
