

(Form 08X)

1. *Registration to be Issued To (Company Name)* - Legal name of entity, business, organization, agency, or private individual that operates equipment.
2. *New Registration*
Registration Operational - Check this box if you intend to operate equipment when registered.
Registration Non-Operational - Check this box if you will not operate the equipment but wish to have the equipment evaluated for compliance eligibility.
3. *Modification to Registration* - This form is for new registrations and equivalent replacements. If you want to modify equipment that has previously been registered and the modification is not an equivalent replacement, please use FORM 1-B, *Modification to an Existing Registration*.
Equivalent Replacement - Check this box if the existing equipment is being replaced by equivalent equipment.
(The APCD registration number of existing unit must be included.)
4. *Equipment Listing* - List multiple pieces of equipment.
Equipment Description - such as conveyors 1, 2, & 3, crushers, screens 1 & 2, etc.
Manufacturer - for example: Simons, Rexnord, or your company name if built in-house.
Model - may be a series of numbers or letters or combinations of numbers and letters, for example: 3612.
Serial Number - A unique, unit specific number, usually on the equipment nameplate. The serial number is necessary to ensure that each piece of registered equipment can be uniquely identified and matched to its respective registration certificate number.
5. *Maximum Throughput Rating* - Indicate the maximum rated throughput weight or quantity in pounds or tons per hour. Include the amount of finished concrete produced in cubic yards per hour or tons per hour.
6. *Equipment Use Including all Operating Scenarios* - Explain how equipment is used, such as “production of concrete for bridge construction,” include multiple uses or operating scenarios.
7. *Normal Equipment Operating Schedule* - The typical operating schedule for the equipment in hours per day, days per week, and weeks per year.
8. *Site Plan, Material Flow Chart, etc.* - Include a diagram showing the flow and quantities of material and how all components fit together, with emission points delineated. In addition, include manufacturer’s specifications or engineering data showing that dust collection equipment controls particulate emissions to 99% and that the minimum moisture content of all stockpiled material is maintained to 4% by weight. Make sure that the material flow chart shows the tons per hour through each transfer point.
9. *Number and Type of Transfer Points* - Describe and list the transfer points identified in the site plan or flow charts required in item 8 above. Specify the method and efficiency of particulate control for each transfer point. Transfer points include crushers, screens, conveyors, stock piles, truck loading, etc.
10. *Number of Cement Storage Silos and Particulate Emission Control Method* - Describe and list all crushers identified in the site plan or flow charts as required in item 8 above. Include the method and efficiency of particulate control for each transfer point.
11. *Fabric Dust Collectors and Operational Pressure Differential Gauge* - Fabric dust collectors must be equipped with an operational pressure differential gauge to measure the pressure drop across the filters. If you do not have a pressure gauge, explain how filters are monitored. If fabric collectors are not used, indicate N/A.
