GENERAL PERMIT OR REGISTRATION APPLICATION FORM

Submittal of this application does not grant permission to construct or to operate equipment except as specified in Rule 24(c). REASON FOR SUBMITTAL OF APPLICATION: Modification of Existing Existing Unpermitted Equipment New Installation or Rule 11 Change Permitted Equipment Amendment to Existing Authority to Change of Equipment Ownership Change of Equipment Location Construct or Application (please provide proof of ownership) Change Permit to Operate Status Change of Permit Conditions Banking Emissions to Inactive Other (Specify) Initial Title V Application Registration of Portable Equipment List affected APP/PTO Record ID(s): 979270 APPLICANT INFORMATION Name of Business (DBA) Hanson Aggregates Pacific Southwest, Inc. Does this organization own or operate any other APCD permitted equipment at this or any other adjacent locations? Yes No If yes, list assigned Site Record IDs listed on your Permits APCD2003-SITE-04824 Name of Legal Owner (if different from DBA) **Authority to Construct Mailing Address Equipment Owner** Name: Hanson Aggregates Pacific Southwest, Inc. Name: Same Mailing Address: P.O. Box 639069 Mailing Address: Zip: 92163-9069 Zip: State: CA City: State: City: San Diego Phone: (Phone: (760) 802-5365 E-Mail Address: Ron. Thompson@lehighhanson.com E-Mail Address: **Invoice Mailing Address Permit To Operate Mailing Address** Name: Same Name: Same Mailing Address: Mailing Address: Zip: City: State: Zip: City: State: Phone: (Phone: (E-Mail Address: E-Mail Address: EQUIPMENT/PROCESS INFORMATION: Type of Equipment: Stationary Portable, if portable please enter below the equipment storage address. If portable, will operation exceed 12 consecutive months at the same location \(\subseteq \text{Yes} \subseteq \text{No} \) Equipment Location Address 8514 Mast Boulevard E-mail: Ron.Thompson@lehighhanson.com Phone (760) 802-5365 Parcel No. Site Contact Ron Thompson Phone (General Description of Equipment/Process Aggregate Crushing & Screening Operator Contractor Consultant Affiliation Application Submitted by Owner EXPEDITED APPLICATION PROCESSING:

I hereby request Expedited Application Processing and understand that: a) Expedited processing will incur additional fees and permits will not be issued until the additional fees are paid in full (see Rule 40(d)(8)(iv) for details) b) Expedited processing is contingent on the availability of qualified staff c) Once engineering review has begun this request cannot be cancelled d) Expedited processing does not guarantee action by any specific date nor does it guarantee permit approval. I hereby certify that all information provided on this application is true and correct. SIGNATURE____ Company Hanson Aggregates Pacific Southwest, Inc. TITLE V APPLICATION	
Insignificant Activity List (FORM 1401-G)	

Company Name	District Use Only
Hanson Aggregates Pacific Southwest, Inc.	NEDS#
Facility Address: 8514 Mast Boulevard, Santee, CA 92071	SITE ID#

LIST OF EQUIPMENT – INSIGNIFICANT ACTIVITIES

Place a check mark in the appropriate box for equipment that is considered an insignificant activity based on throughput or equipment capacity.

Exemptions based on Size (Capacity)

	(Condensed Language of Rule)	Appendix A <u>Citation</u>
x	Stationary & portable internal combustion engines with ≤ 50 bhp output rating	(d)(1)(iii)
	Stationary gas turbines with a power rating of < 0.3 megawatt (MW) or a maximum gross heat input rating of 1 million BTUs per hour	(d)(1)(iv)
	Water cooling towers & ponds with a capacity < 10,000 gal/min not used for evaporative cooling of process water or not used for evaporative cooling of water, contaminated water or industrial waste water from barometric jets or from barometric condensers.	(d)(2)
	Fuel-burning equipment with a maximum gross heat input rate of < 1 million Btu/hour when not part of a process, process line, line, equipment, article, machine or other contrivance for which a permit to operate is required by these Rules and Regulations	(d)(4)(i)
	Fuel burning equipment with a maximum gross heat input of < 20 million Btu/hour, and fired exclusively with natural gas and/or liquefied petroleum gas	(d)(4)(ii)
	Steam boilers, process heaters, and steam generators with a maximum gross heat input of < 5 million Btu/hour	(d)(4)(iii)
	Crucible-type or pot-type furnaces with a brimful capacity of < 450 in 3 of any molten metal	(d)(12)
	Crucible, pot or induction furnaces with a capacity of ≤ 2500 in ³ , in which no sweating or distilling is conducted and from which only non-ferrous metals except yellow brass, are poured or non-ferrous metals are held in a molten state	(d)(13)
	Dry batch mixers with ≤ 0.5 cubic yards rated working capacity	(d)(27)
	Batch mixers (wet) with ≤ 1 cubic yard capacity where no organic solvents, diluents or thinners are used.	(d)(28)
	Roofing kettles (used to heat asphalt) with a capacity of \leq 85 gallons	(d)(33)
	Abrasive blasting equipment with a manufacturer's-rated sand capacity of < 100 lbs or < 1 ft ³	(d)(34)
	Paper shredders and paper disintegrators that have a capacity of 600 pounds per hour or less, and the	
	associated conveying systems and baling equipment.	(d)(41)
	Ovens having an internal volume of \leq 27 ft ³ in which organic solvents or materials containing organic solvents are charged	(d)(59)
	Cold solvent cleaning tanks, vapor degreasers, and paint stripping tanks with a liquid surface area of $\leq 1.0~\mathrm{ft}^2$	(d)(61)(i)
	Cold solvent cleaning tanks, vapor degreasers, and paint stripping tanks which have a maximum capacity of ≤ 1 gallon	(d)(61)(ii)

SDAPCD -Rev. 6/05 Page 1 of 3

TITLE V APPLICATION Insignificant Activity List (FORM 1401-G)

Continued - Exemptions based on Size (Capacity)

	(Condensed Language of Rule)	Appendix A <u>Citation</u>
х	Stationary organic compound storage tanks with a capacity of ≤ 250 gallons	(e)(1)
	Liquid surface coating application operations using hand-held brushes for application of a primer coating from containers of ≤ eight (8) ounces in size, to fasteners to be installed on aerospace parts	(h)(5)
	Liquid surface coating application operations using air brushes with a coating capacity of ≤ 2 ounces for the application of a stencil coating	(h)(6)
	Metal inspection tanks that: a) do not utilize a suspension of magnetic or fluorescent dye particles in volatile organic solvent, and b) have a liquid surface area < 5 ft ² and c) are not equipped with spray type flow or a means of solvent agitation	(o)(5)
	Bakery ovens used for baking yeast leavened products where the combined rated heat input capacity is < 2 million Btu/hr	(o)(37)
Exem	ptions based on Production Rates (Emission Limits)	
	Printing or graphic arts presses located at a stationary source which emits a total of <15 lbs/day of VOC's subject to Rule 67.16, on each day of operation	(d)(7)
	Solder levelers, hydrosqueegees, wave solder machines, and drag solder machines which use < 10 lbs/day of any material containing VOCs	(d)(23)
	Fire extinguishing equipment, using halons with a charge of < 50 lbs. of a Class I or Class II ozone depleting compound.	(d)(31)
	Coffee roasting equipment with a manufacturer's rating of ≤ 15 lbs/hr Equipment used to manufacture bio-agricultural products for exclusive use in field testing required to obtain FDA, EPA, USDA and /or Cal-EPA approval, provided the uncontrolled emissions of VOCs from all such operations ≤ 5 ton/yr.	(d)(45) (d)(49)(iii)
	Oil quenching tanks which use < 20 gal/yr of make-up oil	(d)(56)
	Equipment that is used to conduct research and develop new or improved processes/products, and is operated by technically trained personnel under the supervision of a research director, and is not used in the manufacture of products for sale or exchange for commercial profit, and all emissions are < 15 lbs/day.	
	Powder coating operations, except metalizing gun operations, where surface preparation or cleaning solvent usage is < 0.5 gal/day	(d)(48) (d)(62)
	Equipment used to transfer fuel to & from amphibious ships for maintenance purposes, provided total annual transfers < 60,000 gal/yr.	(f)(2)
	Stationary storage tanks (excluding tanks subject to Rule 61.9) used exclusively for the storage of liquid organic solvents used as dissolvers, viscosity reducers, reactants, extractants, cleaning agents or thinners provided that emissions < 15 lbs/day.	(e)(3)
	Liquid surface coating or adhesive application operations (portable or stationary) where not more than 20 gallons per year of material containing organic compounds are applied	(h)(1)
	Liquid surface coating application operations exclusively using materials with a VOC content of < 20 g/L where < 30 gal/day of such materials are applied.	(h)(2)
	Foam manufacturing or application operations which emit < 5 lbs/day of VOCs	(i)(1)
	Reinforced plastic fabrication operations using resins such as epoxy and/or polyester which emit < 5 lbs/day of VOCs	(i)(2)
	Plastics manufacturing or fabrication operations which emit < 5 lbs/day of VOCs	(i)(3)
	Cold solvent degreasers used for educational purpose and which emit < 5 lbs/day of VOCs	(i)(4)

SDAPCD Rev. 6/05 Page 2 of 3

	TITLE V APPLICATION Insignificant Activity List (FORM 1401-G)	
	Golf grip application stations which exclusively use liquid materials with an initial boiling point of 450°F	(i)(5)
	(232°C), or greater and which emit < 5 lbs/day of VOCs.	(3)(6)
	Batch-type waste-solvent recovery stills with batch capacity of ≤ 7.5 gallons for onsite recovery provided the still is equipped with a safety device & VOC emissions are ≤ 5 lbs/day	(i)(6)
	Peptide and DNA synthesis operations which emit < 5 lbs/day of VOCs	(i)(7)
	Equipment used for washing or drying articles fabricated from metal, cloth, fabric or glass, provided that no organic solvent is employed in the process and that no oil or solid fuel is burned and none of the products being cleaned has residues of organic solvent and VOC emissions are <5 lbs/day	(i)(8)
	Hot wire cutting of expanded polystyrene foam which emit < 5 lbs/day of VOCs.	(i)(9)
	Any coating and/or ink manufacturing operations located at a stationary source, which emit < 15 lbs/day of VOCs.	(o)(9)
	Any operation producing materials for use in cosmetic or pharmaceutical products and/or manufacturing cosmetic or pharmaceutical products by chemical processes, which emit < 15 lbs/day of VOCs	(o)(12)
×	Refrigeration units except those used as, or with, air pollution control equipment with a charge of < 50 lbs of a Class I or II ozone depleting compound.	(o)(18)
	Atmospheric organic gas sterilizer cabinets where ethylene oxide emissions are < 5 lbs/yr	(o)(28)
	Aerosol can puncturing/crushing operations which vents all emissions through a properly operated/maintained carbon canister, provided < 500 cans/day are processed.	(o)(29)(ii)
	Solvent wipe cleaning operations using a container applicator that minimizes emissions to the air where the uncontrolled emissions of VOCs < 5 ton/yr, or the total purchase of solvents < 1,500 gal/yr, or the total purchase of solvents containing a single HAP < 350 gal/yr.	(0)(32)
	Equipment approved for use by the EPA for recovering and/or recycling CFCs provided such equipment is charged with < 50 lbs. of a Class I or II ozone depleting compound.	(o)(33)
	Stationary IC engines rated at \leq 200 bhp installed and operated before November 15, 2000, which operate $<$ 200 hr/yr.	(o)(34)(ii)

Trtle V Application Applicable Requirements Summary Checklist (FORM 1401-H1)

District Use Only	NEDS#
Company Name	Hanson Aggregates Pacific Southwest, Inc.

APPLICABLE REQUIREMENTS: Applicable requirements which apply to an entire facility are listed first. The applicant should check appropriate boxes on the form and attach emission unit specific permit number lists where necessary. Where streamlining is employed, note on this form. If information does not fit in the space allotted, attach documentation and reference it on this form. Type or print legibly.

RULE	RULE DESCRIPTION	Test Method or Rule Section	Monitoring, Records, Reports, Rule Section	Facility ST9HSUTO	Belt Conveyors	Screens	-					Future Effective Date

APPENDIX A: CAM APPLICABILITY ANALYSIS	A
APPENDIX B: APPLICATION FORMS	В
APPENDIX C: PERMIT APPLICATION FEE	. D

Hanson Aggregates Pacific Southwest operates an aggregates production facility (ID #APCD2003-SITE-04824) at 8514 Mast Boulevard in Santee. The facility, referred to hereafter as Hanson Santee, currently operates under Permit To Operate (PTO) No. 979270. The San Diego Air Pollution District (SD APCD) has recently determined that Hanson Santee needs to obtain a Title V permit under Regulation XIV because Hanson Santee is considered a "major stationary source" as defined in Rule 1401(c). Therefore, Hanson Santee is submitting this initial Title V permit application.

1.1. APPLICATION CONTENTS

Rule 1414 specifies requires for a complete application and this initial Title V application is organized as follows to meet Rule 1414 requirements:

- Section 2 describes the facility;
- Section 3 details the regulatory applicability analysis;
- Appendix A includes a CAM applicability analysis;
- > Appendix B includes the required application forms; and
- > Appendix C includes the check for the application fees.

Hanson Santee is an aggregates production facility. Rock is quarried, screened, crushed, and further screened in order to separate it into various size categories. A portion of the production is further processed in a water washing process. Belt conveyors are used to convey materials within the plant. There are three crushers for crushing the mined material into smaller size. Emission control equipment and processes include: three baghouses to reduce emissions from the crushers and water sprays located throughout the process to maintain material moisture content such that fugitive dust is minimized.

The facility is currently permitted to process up to 18,000 tons per day and 5,616,000 tons per year. Plant equipment is periodically moved within the property, depending on the location of the working quarry area.

The facility was initially permitted under PTO 979270, which has been amended several times.

- An overland conveyor and stacking conveyor were added under Application 980468.
- > Two belt conveyors and the vertical shaft impact crusher were added under Application 980763.
- > Various equipment was replaced and the equipment configuration modified so that each crusher would have a separate baghouse under Application 985668.
- ➤ A pit conveying system was added under Application 986624.
- A screen was removed under Application 001238, and another screen was replaced under Application 002255.
- A grizzly, two belt conveyors, and two screw conveyors were removed from the permit under Application 001518.¹

Hanson Aggregates Pacific Southwest - Santee Plant $\,|\,$ Initial Title V Application Trinity Consultants

¹ That application also initially proposed to add 5 conveyors and a screen to the pit system, but those elements of the application were withdrawn and not constructed.

The facility is subject to federal and District air regulations. This section of the application summarizes the air permitting requirements and the key air quality regulations that apply. Specifically, applicability of New Source Review (NSR), Title V of the 1990 Clean Air Act Amendments, New Source Performance Standards (NSPS), National Emission Standards for Hazardous Air Pollutants (NESHAP), and State Implementation Plan (SIP) regulations are addressed.

3.1. TITLE V OPERATING PERMIT PROGRAM

Federally enforceable Title V operating permits are required for major stationary sources of air pollutants as defined in 40 CFR Part 70 and Rule 1401. SD APCD has determined that the operations of Hanson Santee facility requires a permit under the Title V Program. This application requests issuance of a Title V operating permit for the facility.

3.2. NEW SOURCE PERFORMANCE STANDARDS (NSPS)

3.2.1. 40 CFR 60 Subpart A - General Provisions

All affected sources subject to source-specific NSPS are subject to the general provisions of NSPS Subpart A unless specifically excluded by the source-specific NSPS. Subpart A requires initial notification, performance testing, recordkeeping and monitoring, provides reference methods, and mandates general control device requirements for all other subparts as applicable.

3.2.2. 40 CFR 60 Subpart OOO - Nonmetallic Mineral Processing Plants

NSPS Subpart 000 applies to each crusher, grinding mill, screen, bucket elevator, belt conveyor, bagging operation, storage bin, and enclosed truck or railcar loading station in fixed or portable nonmetallic mineral processing plants, for which construction, modification, or reconstruction is commenced after August 31, 1983. The Plant is considered a "crushed and broken stone" processing plant for these purposes, which meets the definition of nonmetallic mineral processing; therefore, each source of the types listed is potentially subject to NSPS Subpart 000. Due to amendments to this Subpart, the regulation has two sets of emission limits and requirements: one for equipment for which construction, modification, or reconstruction was commenced after August 31, 1983 but no later than April 22, 2008, and a second section for equipment commencing those actions on or after April 23, 2008.

3.2.2.1. 1983 Standard

Affected facilities that commenced construction, modification, or reconstruction after August 31, 1983 but before April 22, 2008 are limited to 0.022 gr/dscf particulate matter for point source emissions. A 7% stack opacity limit applies to all affected point sources using dry controls. All affected sources are subject to a 10 percent fugitive opacity limit (15% for crushers without capture systems).

Properly operated baghouses ensure compliance with the NSPS Subpart 000 point source emission limits for the crushers. Other affected sources meet the fugitive opacity limits using a combination of enclosure techniques and wet suppression (water sprays), either on a direct basis or by moisture carryover.

3.2.2.2. 2008 Standard

Sources constructed or modified after April 22, 2008 are limited to 0.014 gr/dscf for stack emissions or 7% fugitive opacity. There is no stack opacity limit in the 2008 standard, except for enclosed storage bins with dedicated dry control devices. The 2008 standard also includes a requirement for 5-year repeat performance tests for fugitive opacity compliance.

All affected facilities currently at Hanson Santee are subject to the 1983 standard.

3.3. NATIONAL EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS (NESHAP)

No standards listed in 40 CFR Parts 61 or 63 have been identified as applicable or potentially applicable to the operations of Hanson Santee.

3.4. 40 CFR 64, COMPLIANCE ASSURANCE MONITORING

Per the applicability criteria in 40 CFR 64.2(a), Compliance Assurance Monitoring (CAM) applies to any pollutant specific emission unit (PSEU) that:

- ➤ Has a Potential-to-Emit (PTE), without taking into account the control device, for one or more regulated pollutants in an amount (in tons per year) equal to or greater than 100 percent of the applicable Part 70 major source threshold;
- > Is subject to an emission limitation or standard for the applicable air pollutant; and
- Uses a control device to comply with any such emission limitation or standard.

CAM requirements do not apply to the following:

- Emission limitations or standards proposed by U.S. EPA after November 15, 1990 under the New Source Performance Standards (NSPS) or National Emission Standards for Hazardous Air Pollutants (NESHAPs) (40 CFR 64.2(b)(1)(i))
- > Emission limitations for which a Part 70 permit specifies a continuous compliance determination method.

Hanson Santee uses emission control devices at each of the three crushers to achieve compliance with the 0.022 gr/dscf emission standard of 40 CFR 60, Subpart 000. The standard was proposed before November 15, 1990, and the baghouses do not use a continuous compliance determination method. According to Table 1 of Appendix A, potential uncontrolled PM_{10} emissions from each crusher exceed the applicable major source threshold. Therefore, CAM applies to each of the crushers. The provisions of 40 CFR 64.5 govern the timing of CAM Plan submissions. CAM Plans are due at the time of the initial Title V application for any "large pollutant-specific emission unit" and are due at the first Title V renewal application for any "other pollutant-specific emission units" subject to CAM. None of the crushers have potential controlled PM_{10} emissions exceeding the major source threshold, and therefore none meet the definition of "large pollutant-specific emission unit". Therefore, no CAM Plan is due as part of this application; a CAM Plan will be due at the first Title V renewal application.

3.5. 40 CFR 82, PROTECTION OF STRATOSPHERIC OZONE

Subpart F of Part 82 includes requirements intended to control releases of ozone-depleting substances and related substitute refrigerants, which include substitutes that are not harmful to stratospheric ozone. Included among these requirements are the Subpart F required practices of persons or facilities that service, maintain,

repair, or dispose of appliances containing such substances. Hanson Santee owns or operates comfort cooling equipment that contains regulated refrigerants. Therefore, the facility's operations are subject to Subpart F requirements. The facility complies by using only certified technicians to service, maintain, and repair such appliances, and by ensuring that any such appliances are managed in compliance with 40 CFR 82.155 at the time of disposal. The facility does not include any equipment rated to contain 50 pounds or more of a regulated refrigerant, so the maintenance and leak repair practices of 40 CFR 82.157 do not apply.

3.6. SAN DIEGO APCD AIR REGULATIONS

3.6.1. Rule 10 - Permits Required

This rule discusses the general requirements to obtain an authority to construct (ATC) and a PTO.

An ATC must be obtained for any article, machine, equipment, or other contrivance that is being built that may emit or control emissions of air contaminants. The ATC must be obtained in writing from the AQCD officer. Each separate unit in a process must receive its own unique ATC. The ATC shall remain in effect until the PTO is either granted, denied, or cancelled. A PTO must be obtained before any person uses or operates or causes to be operated any article, machine, equipment or contrivance. A separate PTO shall be required of each separate unit. The PTO will need to be visible within 25 feet of the permitted unit.

The 8x24 screen shown in the process flow diagram is proposed; an ATC application is being submitted under separate cover. All currently-constructed equipment operates under PTO 979270 issued by the SD APCD. The constructed equipment at the site has not been moved outside of the "contiguous parcel" of land and therefore has not required any new ATC or PTO.

It should be noted that the facility contains storage tanks containing organic materials that are over 250 gallons. However, the liquids in these tanks are not considered volatile liquids as defined in Rule (11)(c)(32) as having a Reid vapor pressure of greater than 3 pounds per square inch or a true vapor pressure greater than 3 pounds per square inch at $100 \, ^{\circ}$ F. Therefore, the organic storage containers at this facility are not required to obtain either an ATC or PTO under the exemption of Rule (11)(d)(17)(i).

3.6.2. Rule 19.3 - Emission Information

This rule is applicable to the owner and operator of sources of emissions of air pollutants or any person who is selling or supplying any material which may cause the emission of air pollutants. The facility operates numerous pieces of equipment that emit air pollutants and thus is subject to this rule. This facility is required by the rule to submit Emissions Statement Forms and/or Emissions Inventory Report Forms.

The District may require the submission of Emission Statement forms and/or Emissions Inventory Report Forms whenever they are deemed necessary by the district. Upon receipt of either of these forms from the District, the person subject to the rule shall complete and return the form within 60 days of the form being provided and provide with the completed form a signed statement by the person or responsible official certifying that the form information is accurate and correct.

3.6.3. Rule 40 - Permit and Other Fees

According to Rule 40(f)(9), the operator shall pay on a time and materials basis, the cost of the District to review and act upon a Title V operating permit application. The fees paid shall be determined based on this rule.

Permit fees calculated in accordance with Rule 40 are included in Appendix D of this report.

3.6.4. Rule 50 - Visible Emissions

This rule is applicable to all air sources in SD APCD jurisdiction not otherwise specifically exempted. Such sources may not allow the emissions of any air contaminant from a single source for periods combining to greater than 3 minutes in any period of 60 consecutive minutes where the contaminants cause a shade or opacity that is darker than 1 on the Ringelmann Chart. The facility complies with Rule 50 through the use of wet suppression (water sprays) and central dust collection controlled by baghouses at targeted locations.

3.6.5. Rule 52 - Particulate Matter

Except for internal combustion engines and sources subject to Rule 53, equipment that is required to obtain an ATC or PTO shall not discharge into the atmosphere particulate material that is in excess of 0.10 grain per dry standard cubic foot of gas. The facility's point source emissions comply through the use of properly operated and maintained baghouses.

3.6.6. Rule 54 - Dust and Fumes

The facility shall not discharge into the atmosphere from any source dust or fumes that exceed the amounts allotted in the table depicted in this rule. All of the individual process units have throughputs of greater than 60,000 lbs/hr and therefore all the equipment in the facility must comply with the maximum weight discharge limit of 40.00 lbs/hr from all sources of dust and fumes as shown in the table in this rule. Estimated emissions of TSP and PM_{10} from each unit are much lower than this limit for each source. Therefore, the facility is in compliance.

3.6.7. Rule 55 - Fugitive Dust Control

Rule 55 restricts fugitive dust emissions from commercial "construction or demolition activity". Lehigh will meet the requirements if there are any "on-site activity preparatory to or for the purpose of building, altering, rehabilitating, raising, tearing down, breaking into pieces, or improving property..." activities at the site.

3.6.8. Rule 61 - Volatile Organic Compounds

These rules limit volatile organic compound (VOC) emissions from several source types and activities. The facility stores and handles organic compounds similar to the regulated materials, including diesel fuel, hydraulic oil, transmission fluid, and motor oil. However, these materials do not meet the Rule 61.0 definition of "volatile organic compound", which requires a Reid vapor pressure or True vapor pressure of 3.0 psia or greater. Therefore, the Rule 61 requirements generally do not apply.²

² Technically Rule 61.2 may apply to transfers of liquids into mobile transport tanks with capacity of 550 gallons or greater that result in generation of VOC vapors; this could occur at this facility when waste oil is transferred from a stationary tank into a mobile tank to be hauled off-site. However, this would be exempted from the emission limitations of §61.2(c) by action of §61.2(b)(1), as any such stationary tank at the facility would be exempt from permitting requirements by Rule 11 due to having a Reid vapor pressure of less than 3.0 psia. Therefore, Rule 61.2 is applicable but has no practical effect.

3.6.9. Rule 62 - Sulfur Content of Fuels

The facility does not include any stationary fuel burning equipment. Therefore, the rule does not apply.

3.6.10. Rule 67.17 - Storage of Materials Containing Volatile Organic Compounds

The facility's insignificant stationary storage tanks for diesel fuel, used oil, hydraulic oil, transmission fluid, and motor oil are subject to Rule 67.17 and comply by being kept closed except when in use. These containers may be equipped with vents as necessary to comply with applicable fire and safety codes.

3.6.11. Rule 1414 - Applications

Rule 1414(f) specifies the requirements for a Title V permit application to be considered complete. With respect to those requirements, it is proposed that the existing terms, conditions, and compliance demonstration methods of PTO 979270 be carried over in the Title V permit.

APPENDIX A: CAM APPLICABILITY ANALYSIS

Table 1: Baghouse Uncontrolled Potential PM_{10} Emissions for CAM Applicability Analysis Hanson Aggregates Pacific Southwest Region-Santee Crushing and Screening Plant

		Throug	fhroughput Rates				Potential	Potential Emissions		
PFD Unit No.	Description	Hourly (tph)	Yearly Throughput (tpy)	Available Control	SDAPCD Emission Factor	SDAPCD Emission PM ₁₀ Emission Factor Factor (Ib/ton)	Controlled Ducted (tpy)	Uncontrolled Total (tpy)	CAM Threshold (tpy)	CAM Applicable?
PC-6 to PC-7 (passing through CR-1 Crusher)	Primary Crushing w/ Baghouse	009	5,256,000	Baghouse (BH-1)	C04	7.00E-04	3.0034	300.4348	7 001	٨

BH-1	TOTO
BH-2	8000
BH-3	7900

lotes:
1 For CAM applicability analysis, emissions from the baghouses are calculated as:
Controlled Ducted Emissions = (Baghouse Air Flow Rate, scfm) x (60 min/hr) x (8,760 hr/yr) x (0.008 gr/dscf) x (Ib/7000 gr)
2 Uncontrolled potential emissions are calculated by addition of fugitive emissions and uncontrolled ducted emissions, where:
Fugitive Emissions = Process Rate x Emission Factor x (100%-95% capture efficiency)
Part of Francis Control Protect Francis (1900) control officionary

APPENDIX B: APPLICATION FORMS
