EXECUTIVE SUMMARY

Pursuant to the Federal Clean Air Act (CAA), the U.S. Environmental Protection Agency (EPA) establishes emission standards for various emission source categories. These emissions standards limit the amount of air pollutants entering the ambient air in order to protect public health and the environment. Section 111 of the CAA requires that EPA establish nationwide emission standards for new and modified sources of pollutants, called New Source Performance Standards, or NSPS, whereas Section 112 of the CAA requires similar standards for existing sources of pollution, called National Emissions Standards for Hazardous Air Pollutants, or NESHAP. Facilities must comply with all existing and applicable NSPSs and NESHAPs, though such requirements are typically incorporated into existing permits and/or local rules.

This item describes the San Diego County Air Pollution Control District's (District) process for updating and administering new and revised NSPSs and NESHAPs from EPA, in a transparent and predictable manner for both District staff and affected stakeholders. Additionally, through the process completed within this action, the District is requesting revisions to specific NSPSs as noted below, which require Governing Board approval prior to incorporating them by reference and requesting EPA to delegate authority to the District to implement and enforce them.

District Regulation X (Standards of Performance for New Stationary Sources) incorporates federal NSPS that were locally adopted and for which the District has received delegated authority to implement and enforce in the San Diego region. The Governing Board last updated Regulation X on September 12, 2024. Since then, the EPA has issued new and amended standards, as noted in Appendix A. Consequently, Regulation X has become inconsistent with current federal requirements and requires amendment. The District proposes to amend Regulation X in accordance with the revisions in Appendix A, which includes the adoption by reference of all corresponding amendments to several previously locally adopted Subparts. District administration of the federal standards will facilitate local implementation and is preferred by both the EPA and regulated businesses. If approved by the Governing Board, District staff will submit a request for delegation authority from the EPA to implement and enforce any new, repealed, or amended NSPSs in the San Diego region. Routine approval by the EPA is anticipated.

Additionally, the District has prepared an informational update of NESHAPs that have been recently modified to ensure stakeholders are aware of relevant changes at the federal level. NESHAPs that have been revised are noted within Appendix A. NESHAP is similar to NSPS, however, the EPA requires facilities subject to NSPS to be subject to testing requirements to confirm compliance with the applicable NSPS. EPA has recently issued new and amended NESHAPs to further protect air quality and public health. These are presented for informational purposes for regulated facilities and the community to ensure such facilities are aware of such changes in a public manner (beyond the notification process that already occurs at the EPA). The revisions are noted in Appendix A. EPA Section 105 grant funding, which the District receives on an annual basis, requires the District to adopt or take action to otherwise implement any new or amended NESHAPs within 12 months of promulgation by the EPA. Local air districts can request delegation of authority to implement applicable NESHAPs from the EPA. To receive delegation, a local Subpart must be adopted incorporating the NESHAP's requirements, or implementation of the federal NESHAP must be authorized in some other manner acceptable to the EPA.

Staff implements a process that is transparent and streamlined, to ensure a routine review of NSPS and NESHAP changes that occur in a timely fashion and allow staff resources to work on other important rule development activities that could further reduce air pollution. This process is described within the Staff Report; the District envisions this process will continue to occur on an annual basis (or as needed).

The proposed rule amendments under consideration pertain solely to Regulation X and NSPSs. As such, Sections III through X of this staff report will refer only to analysis specific to the proposed revisions. A complete summary of modifications being made to Regulation X, as well as informational updates about NESHAPs that have been recently modified, are included within this staff report as Appendix A.

The following statements summarize important elements of the proposed rulemaking:

Comparative Analysis

An analysis comparing proposed amendments to Regulation X with applicable requirements of federal and local regulations (“Comparative Analysis”) is not required because the proposed amendments are verbatim adoption or incorporation by reference of a federal New Source Performance Standard adopted pursuant to Section 111.

Socioeconomic Impact Assessment

Sources must already comply with the requirements included in Regulation X whether or not the requirements are adopted by the District. The NSPS subparts included in Regulation X are already in effect under federal regulations and are enforceable by EPA. The action of adopting these regulations by reference does not impose any additional requirements on affected sources. Therefore, an assessment of the socioeconomic impacts of proposed amendments to Regulation X is not required.

California Environmental Quality Act (CEQA)

Proposed administrative amendments to Regulation X are categorically exempt from the provisions of CEQA as an action taken to assure the protection of the environment, where the regulatory process involves procedures for protection of the environment, and there is no possibility that the activity in question may have a significant effect on the environment.

Environmental Justice

The proposed amendments to Regulation X support the District’s commitment to integrating environmental justice and equity in District’s operations, policies, and regulations by ensuring relevant NSPSs at facilities countywide, including those in under-resourced communities, are made enforceable by the District at the local level. The Board actions will also support the District’s Public Participation Plan by ensuring affected stakeholders and members of the community understand what changes have recently been made in a clearer, more streamlined manner.

I. INTRODUCTION

Standards of Performance for New Stationary Sources (NSPS)

Section 111 of the Federal Clean Air Act requires the U.S. Environmental Protection Agency (EPA) to develop New Source Performance Standards (NSPS) for new and modified stationary sources. The regulations are located in Title 40, Part 60 of the Code of Federal Regulations (CFR).

NSPSs establish emission standards applicable to criteria pollutant emissions. NSPSs establish the minimum control requirements, known as “best demonstrated technology” for all facilities within a specified category. In addition, some standards developed are directed toward existing sources. These standards, known as emission guidelines, are either adopted by the state within their implementation plan or implemented through a federal plan. Each standard is aimed at a specific industry and/or emission unit. Each standard includes emission limitations (some may also include requirements for control equipment), monitoring, testing, reporting, and recordkeeping requirements.

The Federal Clean Air Act (CAA) authorizes EPA to delegate authority for implementing and enforcing NSPS regulations to states or local districts. The San Diego County Air Pollution Control District (District) first accepted delegation for the NSPS program on September 4, 2008. Delegation to the District allows staff to implement and enforce federal regulations at the local level, without further involvement by the EPA.

National Emissions Standards for Hazardous Air Pollutants (NESHAPs)

Section 112 of the Federal Clean Air Act requires that the U.S. Environmental Protection Agency (EPA) develop NESHAPs for all stationary sources. The regulations are located in Title 40, Part 63 of the Code of Federal Regulations (CFR).

NESHAPs are rules that apply to specific types of equipment or industries that emit hazardous air pollutants (HAPs). NESHAPs control HAPs through maximum achievable control technology (MACT) standards, which include control requirements for sources at facilities that have a potential to emit HAPs over the major source thresholds. Examples of sources regulated under NESHAPs include: asbestos in sources such as insulation, roofing, and paint; dry cleaning facilities; glass manufacturing plants; primary copper smelting; and wood furniture manufacturing. Often, the District incorporates requirements found in federal NESHAPs into local District rules and permits.

The Federal Clean Air Act (CAA) authorizes EPA to delegate authority for implementing and enforcing NESHAP regulations to states or local districts. The San Diego County Air Pollution Control District (District) first accepted delegation for the NESHAP program on September 4, 2008.

II. BACKGROUND

Standards of Performance for New Stationary Sources (NSPS)

NSPSs are federal regulations that establish air pollution control standards for certain new, modified, or reconstructed stationary sources. They are issued by the U.S. Environmental

Protection Agency (EPA) pursuant to Clean Air Act Section 111 through Subparts of Title 40, Chapter 1, Part 60, of the Code of Federal Regulations (40 CFR Part 60) and apply uniformly throughout the country. The EPA often delegates primary implementation and enforcement authority to state and local air pollution control agencies. Even so, the EPA retains independent enforcement authority.

District Regulation X (Standards of Performance for New Stationary Sources) incorporates federal standards that were locally adopted and for which the District has received delegated authority to implement and enforce in the San Diego region. Regulation X was last updated on September 12, 2024. Since then, the EPA has issued new and amended standards, as noted in Appendix A. Consequently, Regulation X has become inconsistent with current federal requirements.

The District's NSPS adoption process constitutes the following actions. The District envisions this process occurring on an annual basis (or as needed):

1. To ensure stakeholders are notified of applicable NSPS revisions, the District publishes a 30-day Notice of Public Hearing for proposed revisions to Regulation X and corresponding revisions to Appendix C (as found on the District's website) in a local newspaper (in print and/or electronically) for any new, repealed, or amended NSPS that has been issued by the EPA since the prior related Board action.
2. On an annual (or as needed) basis, the Governing Board considers incorporating by reference any new, repealed, or amended NSPS, and to request EPA to delegate authority to the District to implement and enforce any new, repealed, or amended NSPS, through a recommended action.
3. If recommended by the Board, District staff then submits a request for delegation authority from the EPA to implement and enforce any new, repealed, or amended NSPS.
4. If needed, District staff notifies the public and relevant stakeholders of any significant NSPS changes via a Compliance Advisory or other similar outreach.

National Emissions Standards for Hazardous Air Pollutants (NESHAPs)

Section 112 of the Federal Clean Air Act requires the U.S. Environmental Protection Agency (EPA) to promulgate NESHAPs that apply throughout the country. EPA Section 105 grant funding, which the District receives on an annual basis, requires the District to adopt or take action to otherwise implement any new or amended NESHAPs within 12 months of promulgation by the EPA. Local air districts can request delegation of authority to implement applicable NESHAPs from the EPA. To receive delegation, a local Subpart must be adopted incorporating the NESHAPs' requirements, or implementation of the federal NESHAPs must be authorized in some other manner acceptable to the EPA. NESHAPs are similar to NSPS, however, the EPA requires facilities subject to NSPS to be subject to testing requirements to confirm compliance with the applicable NSPS.

Under State law, a federal NESHAP becomes the State airborne toxic control measure (ATCM), unless the California Air Resources Board (CARB) has already adopted an ATCM for the source category and associated hazardous air pollutant(s). Once a NESHAP becomes an ATCM, CARB and air districts have certain responsibilities related to the implementation and enforcement of the

NESHAP/ATCM. To comply with Health and Safety Code, air districts are required to either implement and enforce the final NESHAP/ATCM no later than 120 days after the effective date of the NESHAP, or adopt an alternative regulation no later than six months after the effective date of the NESHAP.

The District's NESHAP adoption process constitutes the following actions. The District envisions this process occurring on an annual basis (or as needed):

1. To ensure stakeholders are notified of applicable NESHAP revisions, the District publishes a 30-day Notice of Public Hearing in a local newspaper (in print and/or electronically) prior to the relevant Governing Board item with information noting any new, repealed, or amended NESHAP (as found in Regulation XI and Appendix B of the District's Rules and Regulations) that have occurred since the prior related Board action.
2. On an annual (or as needed) basis, the Governing Board receives informational updates regarding any new, repealed, or amended NESHAP; no recommended actions, Board votes, or further delegation authority is necessary for implementation of applicable NESHAPs.
3. If needed, District staff notifies the public and relevant stakeholders of any significant NESHAP changes via a Compliance Advisory or other similar outreach.

A combined summary of the processes for both NSPS and NESHAP revisions are included in the table on the following page:

	NSPS	NESHAPs
Public Notification	To ensure stakeholders are notified of applicable NSPS revisions, the District publishes a 30-day Notice of Public Hearing for proposed revisions to Regulation X and corresponding revisions to Appendix C (as found on the District's website) in a local newspaper (in print and/or electronically) for any new, repealed, or amended NSPS that has been issued by the EPA since the prior related Board action.	To ensure stakeholders are notified of applicable NESHAP revisions, the District publishes a 30-day Notice of Public Hearing in a local newspaper (in print and/or electronically) prior to the relevant Governing Board item with information noting any new, repealed, or amended NESHAP (as found in Regulation XI and Appendix B of the District's Rules and Regulations) that have occurred since the prior related Board action.
Timeline	On an annual (or as needed) basis, the Governing Board considers incorporating by reference any new, repealed, or amended NSPS, and to request EPA to delegate authority to the District to implement and enforce any new, repealed, or amended NSPS, through a recommended action.	On an annual (or as needed) basis, the Governing Board receives informational updates regarding any new, repealed, or amended NESHAP.
Board & EPA Action	If approved by the Board, District staff submits a request for delegation authority from the EPA to implement and enforce any new, repealed, or amended NSPS.	N/A; Board votes or further delegation authority are unnecessary for implementation of applicable NESHAPs.
Notification to Affected Stakeholders	If needed, District staff notifies the public and relevant stakeholders of any significant NSPS changes via a Compliance Advisory or other similar outreach.	If needed, District staff notifies the public and relevant stakeholders of any significant NESHAP changes via a Compliance Advisory or other similar outreach.

EPA has recently issued new and amended NESHAPs to further protect air quality and public health and/or to make administrative revisions as needed. These are presented for informational purposes for regulated facilities and the community to ensure such facilities are aware of such changes in a public manner (beyond the notification process that already occurs at the EPA). The revisions are noted in Appendix A.

III. CONTROL TECHNOLOGIES

This section is not applicable to Regulation X. Sources must comply with the requirements included in Regulation X whether or not the requirements are adopted by the District. The NSPS subparts included in Regulation X are already in effect under federal regulations and are enforceable by EPA. The action of adopting these regulations by reference does not impose any additional requirements on affected sources.

IV. SUMMARY OF PROPOSED AMENDMENTS

The requirements for proposed amendments to Regulation X are summarized below:

Updated dates of recent amendment and/or adoption of NSPS Subparts through June 30, 2025

NSPS Subpart	CFR Reference	NSPS Subpart Title
Subpart A	40 CFR 60.1-19	General Provisions
Subpart Kb	40 CFR 60.110b-117b	Standards of Performance for Volatile Organic Liquid Storage Vessels (including Petroleum Liquid Storage Vessels) for which Construction, Reconstruction, or Modification Commenced after July 23, 1984
Subpart Kc	40 CFR 60.110c-117c	Standards of Performance for Volatile Organic Liquid Storage Vessels (including Petroleum Liquid Storage Vessels) for which Construction, Reconstruction, or Modification Commenced after October 4, 2023
Subpart CCCC	40 CFR 60.2000-2265	Standards of Performance for Commercial and Industrial Solid Waste Incineration Units
Subpart EEEE	40 CFR 60.2880-2977	Standards of Performance for Other Solid Waste Incineration Units for which Construction is Commenced after December 9, 2004, or for which Modification or Reconstruction is Commenced on or after June 16, 2006.

NSPS Subpart	CFR Reference	NSPS Subpart Title
Subpart IIII	40 CFR 60.4200-4219	Standards of Performance for Stationary Compression Ignition Internal Combustion Engines
Subpart JJJJ	40 CFR 60.4230-4248	Standards of Performance for Stationary Spark Ignition Internal Combustion Engines

For consistency, other minor administrative edits were also made to dates and some Federal Register citations throughout proposed amended Regulation X.

V. COMPARATIVE ANALYSIS

Statutory Requirements

Prior to adopting, amending, or repealing a rule or regulation, California Health and Safety Code Section [40727](#) requires findings of necessity, authority, clarity, consistency, non-duplication, and reference, as defined therein. As part of the consistency finding and to ensure proposed rule requirements do not conflict with or contradict other District and/or federal regulations, Health and Safety Code Section 40727.2(a) requires the District to perform a written analysis identifying and comparing the air pollution control standards and other provisions of proposed amended Regulation X with existing or proposed District rules and guidelines and existing federal rules, requirements, and guidelines applying to the same source category.

Analysis

The District finds that an analysis comparing proposed amendments to Regulation X with applicable requirements of federal and local regulations (“Comparative Analysis”) is not required pursuant to Section 40727.2(g) of the California Health and Safety Code because the proposed amendments are verbatim adoption or incorporation by reference of a federal New Source Performance Standard adopted pursuant to Clean Air Act Section 111.

VI. EMISSION SOURCES AND IMPACTS

The proposed amendments to Regulation X, many of which are administrative in nature, are not expected to result in substantial emission reductions. Regardless, affected sources must comply with the revised NSPS requirements proposed for inclusion in Regulation X whether or not the requirements are ultimately adopted by the District. The NSPS subparts included in Regulation X are already in effect under federal regulations and are enforceable by EPA. The action of adopting these regulations by reference does not impose any additional requirements on affected sources. New or amended NSPSs added into Regulation X will result in additional administrative workload for the District’s Compliance and Engineering divisions, to enforce the new federal regulations at the local level and amendments to permits as needed. However, such federal provisions are non-discretionary for the District, and the impacts to existing workload by these divisions will need to be evaluated as new requirements are implemented.

VII. ECONOMIC IMPACTS & COST-EFFECTIVENESS

Statutory Requirements

California Health & Safety Code [40703](#) requires that in adopting any regulation, the District shall consider, pursuant to Section 40922, and make available to the public, its findings related to the cost effectiveness of a control measure, as well as the basis for the findings and the considerations involved. A district shall make reasonable efforts, to the extent feasible within existing budget constraints, to make specific reference to the direct costs expected to be incurred by regulated parties, including businesses and individuals. The District shall also comply with California Health & Safety Code [40920.6\(a\)](#) pertaining to cost-effectiveness of best available retrofit control technology as applicable.

Cost Effectiveness, Incremental Cost-Effectiveness, and Other Costs

Cost effectiveness accounts for the cost of emission reductions, typically expressed in dollars spent per pound or ton of emissions reduced. The District finds that a cost effectiveness evaluation (including an evaluation of incremental cost-effectiveness and other costs) is not applicable to proposed amendments for Regulation X, as the proposed amendments are neither best available retrofit control technology nor a feasible measure pursuant to the sections identified in Section 40920.6(a). Proposed amendments to Regulation X are verbatim adoption or incorporation by reference of a federal New Source Performance Standard adopted pursuant to Clean Air Act Section 111. Sources must comply with the requirements included in Regulation X whether or not the requirements are adopted by the District. The NSPS subparts included in Regulation X are already in effect under federal regulations and are enforceable by EPA. The action of adopting these regulations by reference does not impose any additional requirements on affected sources. Therefore, an analysis of cost-effectiveness is not required.

Socioeconomic Impacts Assessment (SIA)

Per California Health & Safety Code [40728.5](#) (if applicable), whenever a district intends to propose the adoption, amendment, or repeal of a rule or regulation that will significantly affect air quality or emissions limitations, that agency shall, to the extent data are available, perform an assessment of the socioeconomic impacts of the adoption, amendment, or repeal of the rule or regulation. The Governing Board shall actively consider the socioeconomic impact of regulations and make a good faith effort to minimize adverse socioeconomic impacts. This section does not apply to the adoption, amendment, or repeal of any rule or regulation that results in any less restrictive emissions limit if the action does not interfere with the district's adopted plan to attain ambient air quality standards or does not result in any significant increase in emissions.

The District finds that an assessment of the socioeconomic impacts of proposed amended Regulation X is not required pursuant to Section 40728.5(a) of the California Health and Safety Code. Affected sources must comply with the requirements included in Regulation X whether or not the requirements are adopted by the District. The NSPS subparts included in Regulation X are already in effect under federal regulations and are enforceable by EPA. The action of adopting these regulations by reference does not impose any additional requirements on affected sources. Therefore, an assessment of the socioeconomic impacts of proposed amendments to Regulation X is not required.

VIII. ENVIRONMENTAL ANALYSIS

California Environmental Quality Act (CEQA)

The California Environmental Quality Act (CEQA) requires environmental review of certain actions. District staff conducted a review of whether CEQA applies to the adoption of proposed amendments to Regulation X. The District finds that proposed amendments to Regulation X are categorically exempt from the provisions of CEQA pursuant to California Code of Regulations, Title 14, Section 15308, as an action taken to assure the protection of the environment, where the regulatory process involves procedures for protection of the environment, and Section 15061(b)(3) since it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment.

Analysis of Expected Methods of Compliance

Proposed amendments to Regulation X are verbatim adoption or incorporation by reference of a federal New Source Performance Standard adopted pursuant to Clean Air Act Section 111. Sources must comply with the requirements included in Regulation X whether or not the requirements are adopted by the District. The NSPS subparts included in Regulation X are already in effect under federal regulations and are enforceable by EPA. The action of adopting these regulations by reference does not impose any additional requirements on affected sources. Therefore, an analysis of expected methods of compliance is not required.

Environmental Justice

The proposed amendments to Regulation X support the District's commitment to integrating environmental justice and equity in District's operations, policies, and regulations. The amendments incorporate more stringent and up-to-date federal regulations, ensuring that such regulations apply to facilities located within or adjacent to under-resourced communities and are enforceable at the local level. Additionally, the District's process for adopting new/revised NSPSs and notifying the public about new/revised NESHAPs at the Governing Board level on an annual basis, ensures communities that are disproportionately impacted by air pollution are made aware of such revisions in a meaningful way through standard District processes, rather than having to find such information through the EPA.

IX. RULE DEVELOPMENT AND PUBLIC PARTICIPATION PROCESS

On November 10, 2025, a 30-day public notice regarding the Governing Board's public hearing to consider the proposed rule amendments was posted in a local newspaper for a 30-day review period, on the District's website and sent to subscribers of the District's email notification service, CARB, and the EPA. The public notice was sent to over 12,100 subscribers to the District's email notification service. The public notice invited an opportunity for the public to comment on the proposed action prior to and during the Governing Board's consideration of the action, and the District received one letter in support of the action. An additional 30-day Notice of Public Hearing was posted on January 13, 2026, along with notifications to the same subscriber list(s) and government agencies.

X. OTHER RULE AMENDMENTS

There are no other rule amendments associated with this report and rule development action.

XI. CONCLUSION

Proposed amendments to Regulation X are not expected to negatively impact affected residents or industries including small businesses, nor affect employment or the economy of San Diego County. Sources must already comply with the requirements proposed for inclusion in Regulation X whether or not the requirements are adopted by the District. The NSPS subparts included in Regulation X are already in effect under federal regulations and are enforceable by EPA. The action of adopting these regulations by reference does not impose any additional requirements on affected sources. The proposed amended regulation will help ensure the rule meets all federal requirements. This Staff Report addresses all the requirements specified in Health and Safety Code Sections 40725 through 40728.5 for rule development.
